Important dimensional information

Shower trays, doors and enclosures are sold in nominal sizes. Most trays are tiled down onto the rim, therefore the actual finished installation space will be less than the nominal size. It is critical that the shower door or enclosure dimensions are compatible with the actual installation space; check your chosen products for compatibility before purchasing and commencing installation. It is important that the available installation space is measured correctly, and more than once. Take measurements from the top, middle and bottom of the finished area, taking into account tile thicknesses and uneven walls and floors. It is always more accurate to take measurements on the finished tiled surface. All trays must be installed level and fully sealed before commencing the shower door or enclosure installation to ensure correct fit and leak-free showering. The minimum and maximum dimensions shown are the full extent of the available adjustment on each unit and are designed to cover the installation space and untrue walls. Dimensions shown within the brochure are approximate and are subject to change without notice.
