Safety Information

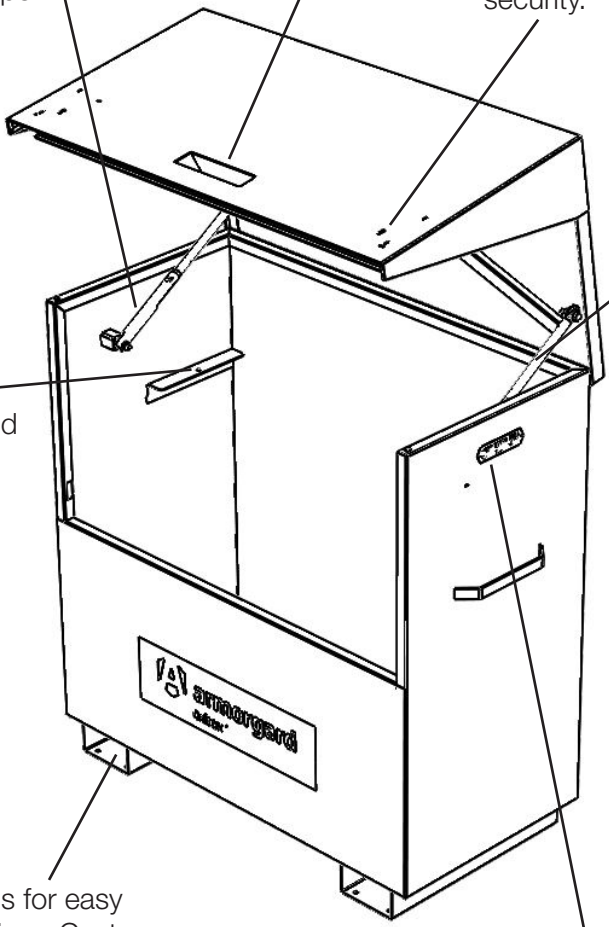

- The OxBox range is too heavy to be safely lifted by one person. Carry out a risk assessment before lifting or lowering any OxBox to ensure there is no risk of injury.
- Before using an OxBox, ensure any relevant risk assessments are carried out. Armorgard cannot be responsible for accidents that occur due to negligence.
- When fitting an OxBox to a vehicle, our guidelines MUST be followed. An empty OxBox can more than triple it's weight in an emergency stop, and could come loose if fitted insecurely or incorrectly.
- If castor wheels are fitted, these must be installed according to our specification, and should be checked regularly to ensure they are still fit for purpose.
- If a gas strut or lid stay becomes damaged, contact Armorgard or your reseller for a replacement.
- Register your product on our website for additional support and for easy access to spare or replacement parts: www.armorgard.co.uk/product-registration

Getting to know your OxBox

Van box range: OX05, OX1, OX2 & OX6

Site box range: OX3 & OX4

Armorgard SlamStop lid stay to ensure the lid is held open.

Recessed handles.

Reinforced 5-lever deadlocks for ultimate security.

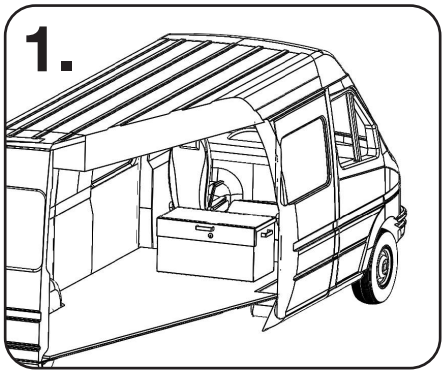

Strong gas struts to assist in lifting the lid.

Optional storage shelf to organise your tools and equipment in the OX4

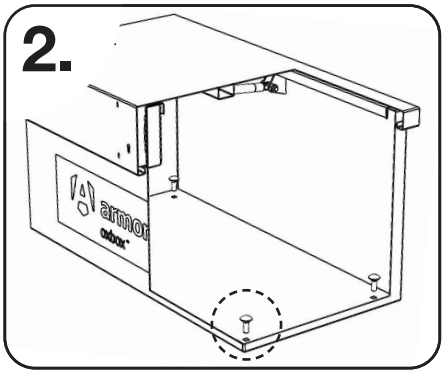

Forklift skids for easy transportation. Castors can be added very simply using our castor kit.

Data plate which lists the unique product serial number and other details.

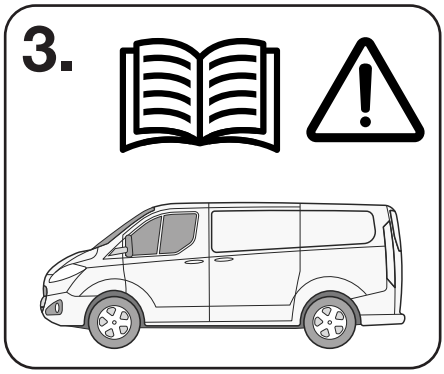

Installing in a vehicle or fixing to a floor

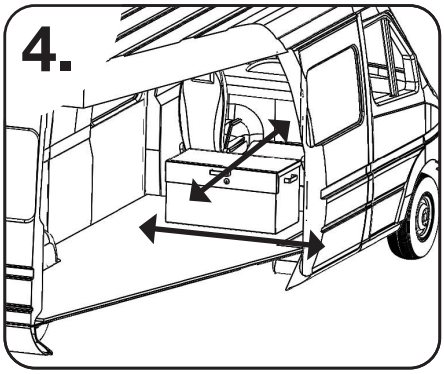

To install an OxBox in a vehicle, these instructions MUST be followed. The van boxes come with coach bolt holes predrilled in the floor of the box for fixing them down.

The OxBox should then be fixed down using four M10 bolts, washers, and shear nuts. The OxBox needs to have a bolt in each of it's four corners fixing it securely to the floor.

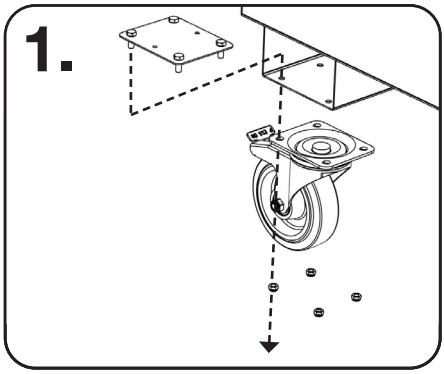

If you are installing the OxBox in a vehicle, you may need to adapt the vehicle. Armorgard can not be held liable for any damage to the vehicle. The vehicle manufacturer should always be consulted to ensure any proposed works will not damage the vehicle.

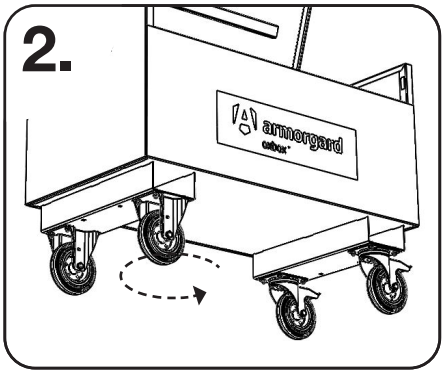

Once installed, test by pulling and pushing the box vigorously in various directions. Bear in mind that an empty box can more than triple its weight in the event of an emergency stop, so it is imperative to ensure it is firmly fixed down.

Fitting the optional Castor Kit

Only the OX3 and OX4 can be fitted with castors. Lift the box onto a stable platform, and then insert castor plates into the forklift skids. Put the castor wheel in place and use a 13mm socket to tighten the M8 nylocks.

Repeat for the other 3 wheels. Once complete, check all nuts are tight, and then ensure the two braked castors can swivel 360° before lowering the OxBox.
