

SMALL SMART SIMPLE

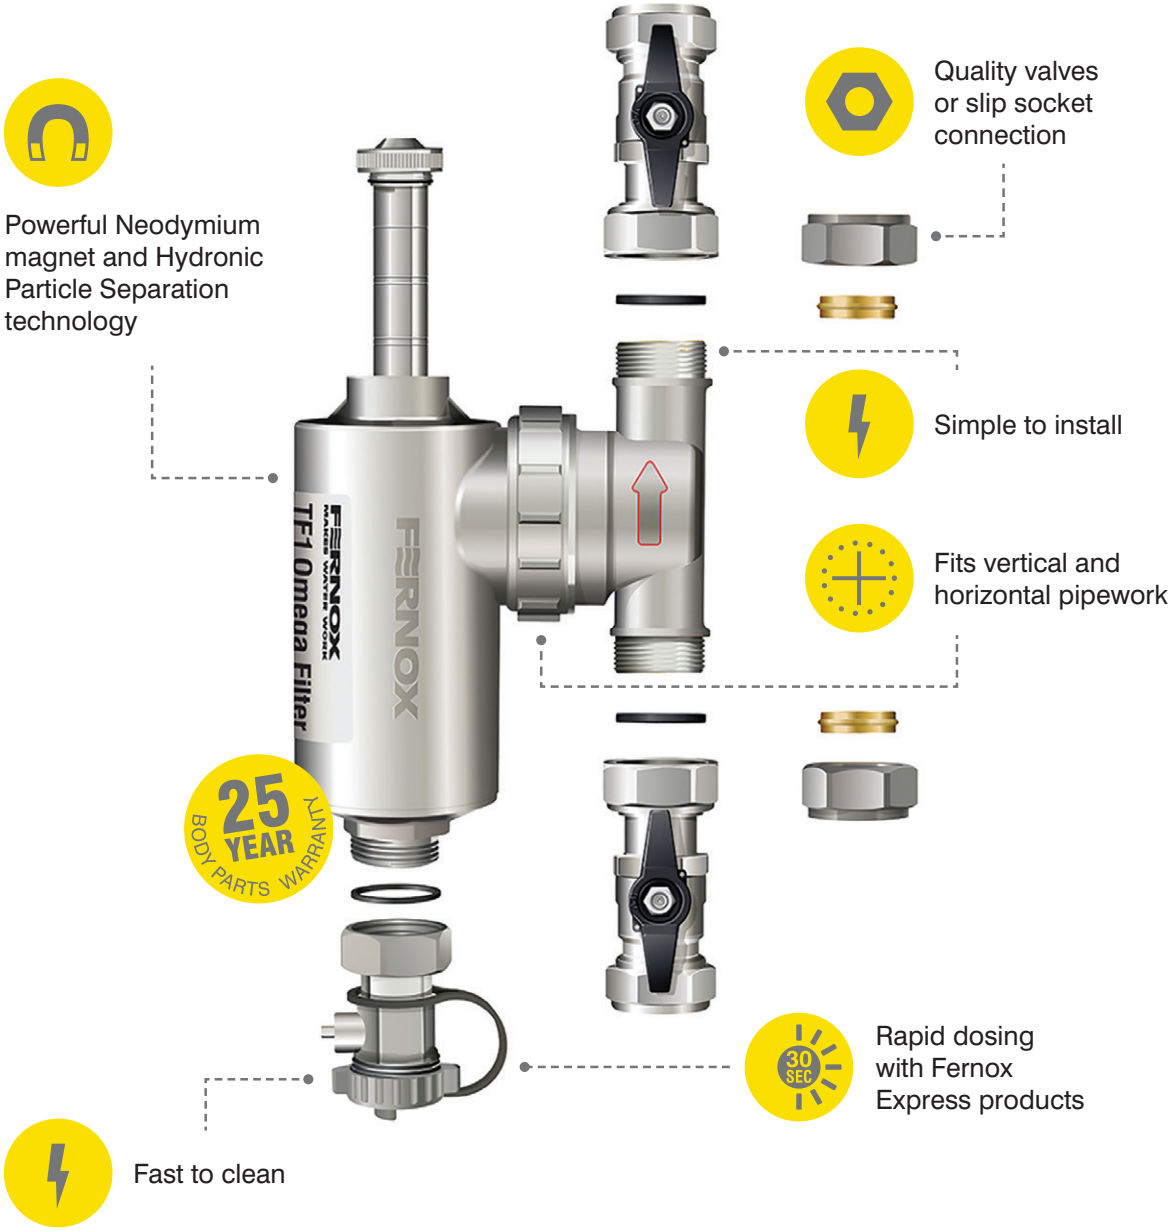

Fernox TF1 Omega Filter

Next generation, high performance nickel-plated, brass in-line system filter.

FERNOX
MAKES WATER WORK

Fernox TF1 Omega Filter

Precision engineered for ultimate reliability

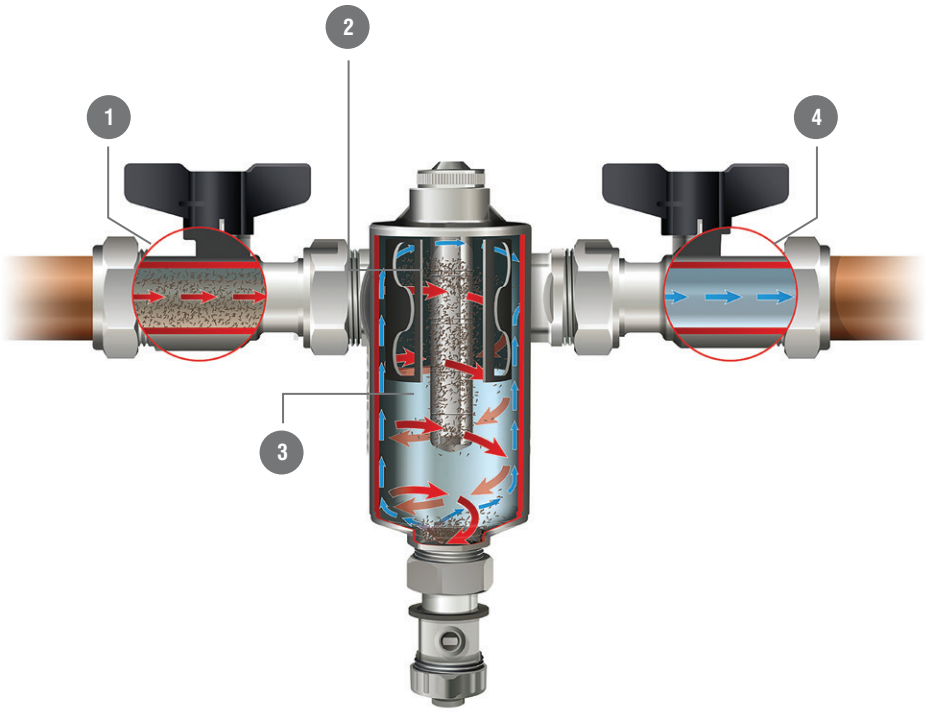

Compact, durable design

Small, yet powerful, the Fernox TF1 Omega Filter is the latest addition to the award-winning TF1 range, ideal for installations where space and access areas are restricted. The nickel-plated brass construction of the filter meets the highest quality specifications and is designed to last – so much so, that Fernox TF1 Omega Filters come with a 25 year body parts warranty.

Maximum system protection

The Fernox TF1 Omega Filter has an excellent collection capacity for both magnetic and non-magnetic debris – first time, every time. Combining the powerful strength of a bespoke Neodymium magnet and Hydronic Particle Separation technology, the Fernox TF1 Omega Filter helps extend the lifespan of a heating system, while optimising performance and efficiency.

Excellent collection capacity with advanced technology

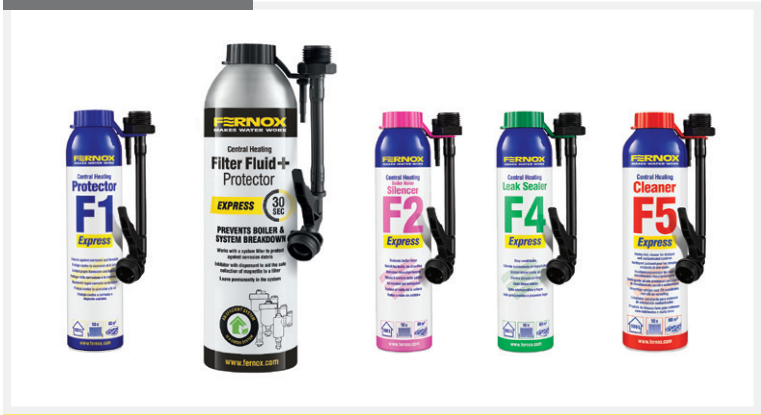

1. Contaminated system water enters the filter.
2. Particle separator plates disrupt the flow to allow contaminants to settle at the base of the filter for safe removal via the drain valve.
3. Hydronic Particle Separation technology optimises flow trajectories into the base of the filter and the Powerful Neodymium magnet collects sludge and magnetite.
4. Clean system water leaves the filter.

Dosing made simple

The Express Range

Saves time on-site and optimises system performance

Quick and convenient installation

The Fernox TF1 Omega Filter has been designed not only to save installers time on-site, but to deliver ultimate flexibility and ease of use. Fast to fit, the filter includes either high quality valves or slip socket connection and is available for 22mm or 28mm pipework. In addition, this innovative filter can be positioned horizontally, vertically and at a 45˚angle – making it easy to install in confined or tight spaces.

Clean in minutes, dose in seconds

Due to its unique design, cleaning the Fernox TF1 Omega Filter is a fast, mess-free process that can be done in situ. Fernox Express products can be dosed into the system via the filter in less than 30 seconds.

Stopping corrosion and scale developing could not be made simpler or quicker.

Quality, simplicity and uncompromising commitment to technical excellence are at the heart of the Fernox philosophy.

Setting new standards of innovation, the Fernox TF1 Omega Filter and Fernox Filter Fluid+ Protector respond to today's ever changing market, signifying a milestone in water treatment.

Developed with the installer in mind, this unique duo of products helps to not only optimise energy efficiency, but to extend the lifespan of domestic heating systems and reduce time spent on-site.

With over 50 years of experience and millions of satisfied customers, history speaks for itself…
