Blade Material Types

Bi-M (Bi-Metal)

Combining the flexibility of a HCS body with a HSS hardened cutting edge, resulting in a tough, shatter resistant blade. Longer service life leads to greater cost effectiveness per blade.

Tungsten Carbide Tip

Combining the flexibility of a HCS body with TCT cutting edge, resulting in a tough blade which keeps its edge.

HCS (High Carbon Steel)

High Carbon Steel Blades for use with softer materials, such as hard and soft wood, plastics and laminated boards.
